Output audio formats: AAC, MP3, WAV, AIFF, M4A

Convert one file to different formats simultaneously

You are allowed to input the same source file repeatedly and set the output formats for each. Then you can get different output files simultaneously.

Support devices

iPod, iPod touch, iPod touch 2, iPod nano, iPod nano 4, iPod classic iPhone, iPhone 3G, Apple TV

2. Full featured and powerful editing functions

Audio track and subtitle

You are allowed to select audio track and subtitle.

Watermark video

4Easysoft Mac iPhone Video Converter provides you with the function of watermarking your video through setting the contents, position and transparency of the watermark.

Video Trim

If you want to capture any parts from your movies, you can trim your movies by setting Start Time and End Time or dragging the start slider and the end slider, so you can get your favorite clips from your movies.

Video Crop

If a movie has black video sides during playback, you can remove the black sides by cropping video to only keep the real video part.

Set Brightness, Contrast and Saturation

If you are not satisfied with the original movie effect, this iPhone Video Converter for Mac can help you adjust video brightness, contrast and saturation to get the best effect you want. You can also check the Deinterlacing box to switch the interlacing video to progressive video for much clearer video quality.

Feel free to change output parameters

Provide you with adjustable parameters like video Encoder, Resolution, Frame Rate, Bitrate and Audio Encoder, Sample Rate, Channels, Bitrate to get smooth watching and listening experience. Well-customized profile can be saved as "User-Defined" for your later use.

Merge more than one video files into a single file

You can merge video clips and different video files into one video file using 4Easysoft Mac iPhone Video Converter.

Preview the input files before conversion and snapshot images you like

Preview your original video and output video effect to avoid mistakes. Capture any movie images from video with the built-in player when previewing and save as JPG, BMP, GIF files.
