- 

### **Make JPG, GIF, BMP and PNG pictures into iPhone video**

Create iPhone MP4/MPEG-4 video or MOV by converting your favorite photos in JPG, GIF, BMP and PNG formats for watching pictures like a slide.

## **Key Features**

- Automatically split a video file into several iPhone video files with the size or time length you customize.
- The built-in bitrate calculator allows you to get the output file with the size you want by entering its value in the tool.
- By setting the start time and duration, you can directly rip DVD segment or convert any video segment to iPhone MP4 video.
- All profiles are optimized in parameter. Also, you can adjust the parameters for a profile like bit rate, frame rate, sample rate, channels and zoom, and save as your own.
- Adding several profiles to one source file at one time makes it convenient and fast to output those iPhone video or audio files at the same time.
- The DVD to iPhone converter can automatically read and retrieve DVD info from Internet including DVD cover, director, actors/actresses, release date, and so on.
- The DVD to iPhone converter and iPhone video converter can be run in background to finish ripping and converting for possessing less space.
- Preview DVD movie or video before ripping and converting, and take a snapshot when you find your favorite video images.
- Support batch conversion and multithreading for converting DVD movie or video to iPhone video or audio one by one for timesaving.
- Provide you with several after done options: shutdown, exit, hibernate and standby. With one of these options, you have no need to wait the ripping and converting process to the end.
