**4Media Video Converter for Mac** is the ideal video converting tool for Mac users to convert amongst a diverse array of standard-definition (SD) video formats including AVI, MPEG, WMV, DivX, MP4, MOV, XviD, 3GP, FLV, and high-definition (HD) formats like MPEG2-TS, AVCHD, and MKV. This Mac video converter also enables you to extract audio from videos and then convert audio formats from one to another.

Furthermore, this fully integrated Mac converter software enables you to convert videos to images and create videos from images. 4Media Video Converter for Mac makes it possible to view just about any format file on just about any multimedia device including the iPod, iPhone, iPad, Apple TV, PSP, PS3, Xbox360, Zune, PMPs, Google phones, and mobile phones. Batch file processing and multithreading are also supported offering unprecedented multi-file conversion speed.

**4Media Video Converter for Mac** features a variety of file editing tools enabling you to clip, merge, crop, split videos, as well as add watermarks and soundtrack to them.

### Key Features

#### Video Clipping
Extract your favorite parts from a video and removed unwanted bits; merge them together if necessary.

#### Add Soundtrack
Add music or sound file to your video if you have no soundtrack in it.

#### Edit Video Effects
This Mac video converter gives you the freedom to remove redundant bits from your video image like logos and black edges, adjust image brightness, saturation and contrast, as well as add copyright and mark your video with text/picture watermarks. A variety of special effects are also available.

#### Merge Files
Merge several files into one; add unique transitional effects in between every two files to smoothen scene transitions.

#### ConverterSplit File
Choose from one of the preset modes to split your video; customize the split by size or duration.

## Output Files to Devices Directly

This video file converter allows you to transfer the converted files to iPod, iPhone or PSP directly after conversion.

## Output File to Different Formats

Select several conversion profiles for your file and simultaneously convert it to the required formats accordingly.

## Output File to the Desired Size

Output your file to the required size using this video converter for Mac's built-in Bitrate Calculator.

## Conversion Profiles for Different Devices

4Media Video Converter for Mac comes with conversion profiles tailored for all popular digital devices including the iPod, iPhone, Apple TV, PSP, PS3, Zune, PMP, Wii, NDS, mobile phone, Windows mobile and so on.

## Detailed Output Parameter Settings

Adjust a detailed range of output parameters including video/audio quality, zoom mode, audio channel, bit rate, and frame rate; all conversion parameters are sorted by categories for easier customization; you have the ability to customize an existing profile and save it as your own.

## Preview Effects

This Mac video converter allows you to compare the original and the edited video with effects added together in real-time.

## Batch Processing and Multithreading

Batch processing and multithreading allows high-speed simultaneous multi-file conversion.

## Preview Video & Take Snapshots

Preview your video with this AVI/WMV/MPEG converter for Mac's built-in media player before you convert; take snapshots of your favorite moments while previewing.

## Multilingual Interface

4Media Video Converter for Mac's user interface is available in German, English, Japanese, French and Chinese.
