Video to 3GP Converter is the easiest and quickest way to turn your videos into high quality movies playable on cellular phone. It enables you to build your movie with a few simple drag-and-drops, delete bad shots and include only the best scenes and then export your movie to cellular phone playable movie files. You can even edit and combine popular file formats including AVI, WMV, ASF, MPEG and many more. This really comes in handy and saves a lot of time, when you want to create something truly unique from multiple media sources.

Video to 3GP Converter is a one-stop DV to cellular phone software that helps you convert your videos into high quality movies playable on cellular phone. The intuitive step for step operation enables user easily import videos, arrange video clips, export videos to cellular phone playable movie files.

With this powerful Video to cellular phone software, you can:

1. Capture videos

The process of transferring video from your camcorder or other video sources to your computer is called capturing. When everything is ready to go, the video feed from your source device should be visible in the Preview Window. You can also add any existed AVI, WMV, ASF, MPEG video files as the raw format videos.

2. Edit Movies

The Edit Step is where you arrange, edit and trim the video clips used in your project. In this step, you can apply fade in/fade out effects to the existing audio of a video clip, extract or split video, and adjust a clip's playback speed. You can also choose from a wide selection of video filters to apply to your clips.

3. Generate cellular phone playable Movies

Render your project into a video file format that is suitable for your audience or purpose. Then, export the rendered video file as 3GP MP4 format supported by most mobile devices

such as cellular phone, PSP, mobile phone.
