AV Music Morpher is a creative one-stop audio editor software for both the most inexperienced and Pros. It includes: Voice morpher to change singer voice in two dimensions, voice pitch and voice timbre, to be either man, woman, or characterized; Tempo morpher change tempo to faster or slower; Beat tracking with various preset beats, bongos and drum loops; Cher modulation to create Cher effect; 32 real-time single effects which can be combined up to 4 layers; and other audio optimizing tools: advanced tune, beat tracking quality controller, frequency morpher, equalizer. Powerful tools for setting treble, bass, stereo, surround and making effects archive.

Advance Morpher works as an effect mixer, enabling user to edit special effects and mix them limitlessly to create new, complex effects. External plug-in effects can be added to your effects library.

Morpher and Advanced Morpher can morph music in real time, thus giving a new experience to music listening. They can also morph an audio file to a new file in another format, thus working as a converter to convert files between 10 supported formats: mp3, mp2, wav, wma, ape, ogg, au...

Another major tool is Wave Editor (aka Audio Editor), a built-in audio editor to edit sound files in a wave chart. Wave Editor enables user to zoom, copy, cut, paste segment of sample and then save as new file. Wave Editor allows multi track mixing to add background music to voice recording or make duet songs. The MP3 player and recorder are developed to record sound from microphone, then save recorded file to many formats; and it is compatible with karaoke players to record karaoke singing. Not only can it morph sound files, convert formats, and edit audio files.

AV Music Morpher is also a CD maker and film maker. It provides ripping and burning tools to rip cda tracks from CD to hard disk, burn audio files from hard disk to CD, and burn data CD/DVD. Cover editor will help complete the CD/DVD with label, inlay and cover.
