Create video from picture

Create AVI, MPEG-1, MPEG-2, DivX, WMV videos by converting picture collections in JPG, PNG, GIF, BMP.

Multi-core CPU optimization

Support for multi-core CPU technology is designed to make the most of your CPU and speed up the video conversion.

Key Features

- Batch conversion and multithreading help you convert multiple files all at the same

time without time-and-time clicks.

- Able to split one MOV file into several and convert any segment of one file by entering the start time and duration.
- Change basic and advanced parameters like bit rate, frame rate, and codec to get a better output quality.
- Compress your MOV videos with the help of Bitrate Calculator by specifying the output file size you want.
- Add multiple profiles in the same or different formats for one MOV file and convert them at the same time.
- Run the MOV Converter in the background when converting; auto shut down the computer when the job is complete.
- Support playing the output video files for preview with the built-in player, where you can also view file information.
- Capture your favorite movie images for Quick Time video files and save as JPG, GIF, PNG, BMP files.
