3GP or 3GPP are audio and video container format developed by the 3rd Generations Partnership Project (3GPP). It is designed as a multimedia format for transmitting audio and video files between 3G cell phones and over the Internet; commonly used by mobile phones that support video capture.

As the number of 3G phone users getting larger and larger, the activities of 3GP video delivering, recording and playing becomes heated dramatically. People need more music, video, movies resources to enrich their 3G life. Mac 3GP Converter is developed to turn every media source available to you into of 3GP video that completely playable by your phone.

Whether it is video files from YouTube, Myspace, Hulu, downloads, torrents, ripped DVDs, etc, and no matter whatever formats the video are, **3GP Converter for Mac** can easily get them onto your 3G phone and let you enjoy them on the go. 3GP video converter for Mac can also convert your own 3GP video to a variety of other formats for web, blog, or optimized for iMovie, iTunes, iPod, iPhone, etc.

With the program, you are no longer to worry about video format issue any more. It supports to export mov, avi, mpg, flv, wmv, mp4, m4v, dv and a variety of others to 3gp or 3g2 for playback on mobile phone. And can convert from 3gp to any other formats with few mouse clicks. .3gp converter for Mac can customize the video size to be fitable into your 3G phone screen, you can also trim, crop, rotate and even merge video files for specific project purposes.
