I've lost count of how many times I've heard people complaining that the software hasn't caught up with the hardware. That's the case we stand with AVCHD camcorder. And seems the only thing we can easily do with the AVCHD video is to play it on an HDTV, direct from the camcorder. Isn't there any easy way to playback and edit the AVCHD (m2ts, mts, ts, trp).

If you have not been able to take advantage of the AVCHD file format or still got no luck to get it out into the world to playback and edit. AVCHD Converter for Mac should be the matured software you've always been looking for. The software includes all the necessary codecs needed to transcode the AVCHD to .mov, mpeg-2, mpeg-4, DV, avi, mpg, wmv, flv, asf, 3gp and mp3, etc so that they can be workable with Quicktime, iMovie, Final Cut Express/Pro on Mac.

**AVCHD Converter for Mac** is able to run both on Intel Processor and PowerPC, and the smart built-in player can easily playback AVCHD files on Mac with high visual quality. Mac AVCHD converter has simple yet powerful video editing capacity that allows you to trim, crop, add effect and merge files into one. You can also adjust aspect ration to widescreen 4:3 or16:9, and tweak resolution, bit rate, frame rate, depending on your project.

**Get Other Version Here:**
