Assuming that a hundred people trying to back up the content of a DVD or transfer video on DVDS to different formats, to edit or simply play its video on another platform, none of them wants to mess with bitrates, frame rate, audio/video codecs, or answer any questions about "passes".

A powerful yet simple-to-use software program is what you need. **DVD Ripper for Mac** facilitates copying DVD to hard drive and ripping DVD to AVI (DivX, XviD), MOV, MPEG-1/MPEG-2/MPEG-4, WMV, MP4, H.264, 3GP and FLV, etc. all the copy protection issues like regional code, restriction, encryption, etc can be carefully taken care of.

The idea of watching popular TV episodes or entire movies from your iPod, iPhone, Blackberry or 3G phone sounds like a day dream, until one realizes that Apple entirely expects you to pay separately for an iTunes copy of the flick. DVD Ripper on Mac enables you to converting DVD video for playback on media players and mobile devices as simple as few mouse clicks.

The intuitive design of the movie editing function within Mac DVD Ripper empowers you to trim, crop, rotate and merge video files so that you can accurately select a title, a chapter or a part of the chapter to edit and transcode to different format. You can tweak resolution, frame rate, bitrate, audio channel and adding video effect depending on what project you are working on.
