MP3 becomes more popular because of its smaller file size for CD close quality, more music can fit on one CD in mp3 format and faster it becomes when sending/receiving over internet. MP3 has become the standard for exchanging music on the Internet. More and more portable playback equipments support mp3 like MP3-CD-Walkmans, Car-radio's, DVD players, iPod, iPhone, Creative Zen.

There are times you may need to extract audio track from a movie of your type and would like to save the audio as mp3, flac, aac, amr, aiff or wma etc for authoring CD. Or there are times you need to convert some audio files to Mp3 for playback on your devices like iPod, iPhone, Blackberry and other mp3/mp4 players. MP3 Converter for Mac walks to us at the right time, it is a simple-to-use program that can easily extract audio from video, and can convert a vast variety of audio files to mp3 with fast speed and original output quality. You can input popular Youtube video, QuickTime files, iTunes audio (unprotected) or Mobile phone video to convert them to MP3.

**MP3 converter for Mac** is suitable for both novice and pro alike users; the batch import and batch conversion feature can save your precious time a lot. The program allows you to trim video/audio files and merge pieces together so that you can always get the best part of audio as you wish.
