Micro Video Capture - Superior Video software to capture and edit your favorite video or image to popular video formats

With Micro Video Capture, you can record video and image from webcam, TV tuner card, digital camera and other capture devices in real time, and all captured video files can be saved as AVI format by using any compression codec.

What's more, it enables you to set each capture device's properties, preview recorded files, add water mark or texts on your captured file, and even watch TV program if there's a TV tuner installed.

Main Features

- Grab real-time video or image by just clicking several buttons on the control panel.
- Preset properties of each capture device.
- Preview recorded files, watch TV if there's an installed TV tuner.
- Add water mark or edit texts on video or image.
- Save captured video files as AVI format via any compression codec.

Why Choose Micro Video Capture

- It is excellent both in speed and visual quality.
- The intuitive interface helps you get familiar with the software quickly.
- The investigation of our users shows that it saves 18% time in capture process.
- It is your one-way ticket to video capture.
