Movavi Video Converter 3D is another commercial software that allows easy 2D to 3D video conversion with Side by Side output as well as multiple anaglyph formats. The software uses the same easy and familiar simple autoconversion techniques relying on frame offsetting and deformation in order to produce the illusion of real depth in a 2D video.

3D Video Modes

The visual ability to perceive the world in 3D is a little different for everyone. That's why Movavi Video Converter 3D offers a range of 3D modes - Stereo, Anaglyph, Anaglyph Gray, and more - so you can choose the one that best suits you, your monitor, and your glasses.

3D Video Parameters

3D Depth, Shift and Perspective are the parameters making the magic of adding 3D 'volume' to 2D videos. Experiment with different values to get the maximum depth perception. Thanks to the real-time preview feature, you'll see the results immediately.

3D Video Preview

The real-time preview shows your custom-designed stereo and anaglyph 3D videos. Your clip in the preview window changes the moment you change the mode or parameter value. Now you can see far more than the conventional planar 2D can offer!
