Key Features

Convert video to any format and device

- Extensive Media Format Support

Support for more than 170 video (including HD!), audio, and image formats.

- DVD Ripping

Save unencrypted DVDs to any media format. Switch between audio tracks to get DVD movies in the language of your choice.

- **NEW!** NVIDIA® CUDA™ Optimization

NVIDIA CUDA optimization gives you smooth media playback and 8x gain in video processing speed on PCs with CUDA-enabled graphics card and 10x gain on PCs with multiple-GPUs.

- Format Settings Adjustment

Advanced users will appreciate the precise control and ability to manually adjust output video parameters when converting videos.

- Customizable Target Quality & File Size

The 'Target Quality' function lets you set the quality and size of the output file by moving a single slider.

- Ready-made Presets for Mobile Devices & Export to iTunes

Rip media into the format supported by a particular mobile device.
Export media files to iTunes when the conversion is complete.

- Video Editing Tools & Professional Filters

Crop, rotate, add watermark, split, join. Enhance quality, adjust brightness, contrast, and fix common video problems with professional filters.

- Support for Multi-core Processors & Batch File Conversion

Convert multiple files simultaneously on multi-core processors. The video conversion speed gain on PCs with AMD or Intel multi-core processors equates approximately to the number of processor cores: convert video up to 2, 4, even 8 times faster!

Convert files in batches. Set output format for each file individually or convert all files to one format.

- Advanced Actions on Successful Completion: Shut Down/Hibernate

Movavi Video Suite can now convert video for you while you sleep! You can also specify what the program should do on completion of the conversion: shut down or hibernate.

Create Slideshow

- Support for image formats

Add JPG, BMP, GIF, and PNG images and photos to your slideshow.

- Photo preview

Photo thumbnails makes the process of slideshow creation easy. You can even enlarge selected photos and switch to Full Screen mode.

- 'Rotate Photo' & 'Easy Fix' Tools

Rotate photos by 90, 180, or 270 degrees. Repair photographic mishaps and less-than-perfect images with the automatic enhance filter.

- Music & Special Effects

Overlay music or sound effects to create the perfect atmosphere using most popular audio formats.

- Share Your Creation

Save your slideshow to any popular format, transfer it to a portable device, or burn it to a CD or DVD.

Edit Video

- Edit Video on the Timeline Panel

Create your own video masterpiece using a customizable timeline with separate tracks for video, audio, and titles. Add as many tracks to the timeline as you need — the only limitation is your hardware.

- **NEW!** HD Fast Track

When adding HD video, Movavi Video Suite generates a special smaller video file so your editing is faster and smoother because you're not working with the oversized original video file.

- Special Video Effects

Use Movavi Video Suite artistic affects to make your home videos really special. Choose from Picture-in-Picture, Mosaic, Add Noise, Posterize, Diffuse, Grayscale, and more.

- **NEW!** Chroma Key Effect

With the new chroma key effect, walking on water and visiting Baden-Baden is possible in your home videos! The effect removes a particular solid color — keys it out — from the video, making it transparent. When Movavi Video Suite has removed the background, you can add any background video on the adjacent track — now you have the power of the television studio on your desktop!

- Professional Filters

Experiment with professional-grade cleaning filters like Denoise, Deblock, Brightness/Contrast, Gamma, Color Balance, and more to restore the original quality of old or damaged videos.

- Video Transitions & Crossfade Transition for Audio Tracks

Ensure your audio tracks blend smoothly into each other.

- Volume & Opacity Envelopes

The Volume envelope lets you control audio fade-in and fade-out as well as overall volume level, while the Opacity envelope sets overall opacity levels and lets you fade video events in and out.

- Screen Capture

Create a screencast — a digital video of what's happening on your computer screen — without any additional software. Record narration or any other soundtrack as you capture your screencast.

Split Video

- Automatic & Manual Splitting

Split, cut, and trim your video automatically by size, time or number of segments; you can

also manually choose the beginning and end points of any segment you want to split out.

- Select Marker Positioning by Exact Time

Set the position of start/end selection markers by entering the exact time, down to fractions of a second.

- 'High Speed' & 'High Accuracy' Modes

Want to convert files without loss of quality, or select the precise start and end points of a video clip? All you need to do is choose 'High Speed' or 'High Accuracy' to switch to the right mode.

- Join Mode

Now you can not only split your video into parts but also join selected segments and combine them into a single movie.

Create Blu-ray Disc™/DVD/CD

- **NEW!** Create Blu-ray Video

Just imagine, over 9 hours of high-definition video on just one disc — it couldn't be more convenient. Expand the powers of Movavi Video Suite with the possibilities of the Blu-ray Disc Plug-in!

- Burn DVD and CD

Burn your favorite video to CD or DVD. Create high-resolution wide-screen video DVDs and play them on your wide-screen TV! Burn audio CD.

- Adjust DVD Burning Settings

Specify DVD video quality to get the exact results you want.

- Create Blu-ray Disc™ and DVD Menus

Choose from more than a dozen original Blu-ray and DVD themes so your disc will instantly grab your viewers' attention!

- Burn Data CD, DVD & Blu-ray Disc™

Copy and back up data from your hard drive to a CD or DVD — so you'll always have an extra copy available. Burn Blu-ray 25GB and 50GB discs.

- Create, Burn, and Copy ISO Files

Create an ISO image from any file stored on your computer, copy it, and burn the ISO image to CD and DVD.

- Verify Discs

Test recorded CDs and DVDs to ensure no loss of data.

Capture Video

- DV, HD, HDV and Web Camera Support

The Capture Video application captures video from DV cameras to AVI and saves MPEG-2 TS and AVCHD video from cameras to PC. You can also capture live video — shoot and save video to the computer at the same time — ideal for shooting video messages, video instructions or introductory comments.

- **NEW!** TV-tuner Support

The Capture Video application automatically detects a TV-tuner and adds it to the list of Video Capture Sources. Choose the channel you need from the list or add a new channel and start to capture!

- **NEW!** VHS Capture

Revive your old movie collection and family videos stored on VHS cassettes! Just connect up your video recorder or plug the VHS capture device into your PC — it will be automatically detected by the Capture Video function — and just press the Capture button.

Play Video and Audio

- Extensive Format Support

'Play Video and Audio' application supports more than 170 video formats, including DVD and high definition video.
Learn more...

- DVD Audio Tracks & Subtitles

Watch DVD movies in the language of your choice, and switch between audio tracks & subtitles.

- Playlist & Shuffle Toggle

Create and manage your own playlists and add single tracks or entire folders. Play videos one by one or activate the Shuffle mode to play items randomly.
