A special design for Mac pc and laptop users, video converter for Mac becomes a necessary part to supplement some of the code inefficiency comes with Mac. Not only work perfectly well on Mac operation system platform, but also it is elaborately designed to let most popular of portable devices nowadays workable with Mac.

Video converter for Mac supports almost any popular video and audio formats for later conversion on Mac. We provide you a free room to tune the various video & audio related numbers like Encoder, Bitrate, Framerate, Channel and Resolution to get your desired output outcome. The powerful video editing capacity like rotate, crop, trim, audio extraction and views capturing will satisfy all your needs.

And the two special formats, .Mod and .Tod, are especially new ones I'd to strongly introduce here. These are two video formats exported by most camcorders like Sony, Panasonic and JVC CAN now be totally supported by the video converter for Mac, which allows you to convert .mod/.tod to mpg, avi, mov or mp4, so that you can easily edit them in most editing suite and view them with different players.

Video converter for Mac provides you a perfect solution to manage almost any video and audio file. It also gives a standard answer to how to make video and audio for portable devices like iPhone, iPod, Blackberry, creative Zen, etc. The batch conversion mode will definitely save you from time and pain to convert loads of video/audio. Join us now
