Quality control
perfect quality
Use our quality advisor to adjust the settings of your project to get the best quality. Choose between H264 encoder or MPEG4, and whether you want the final resolution to be in 720p or 1080p. Select the output size from a list or set your own custom size. The output can even be split over 2 disks. See before you even start the conversion process what the quality will be and adjust settings for fine tuning. Never be disappointed again by poor quality results! Blu-ray To PS3 also uses our advanced Image Filter to converts images down from HD to SD or select the output to be in High definition and no resize will be needed! Our image filter has already proven itself to be one of the best image resizing solutions on the market today.

Simplified with Advanced technology
Our advanced discriminator technology does all the hard work for you behind the scenes. Whether you want to convert a movie or a Blu-ray series, the discrimintor presents the main files you need and insures the correct ordering of the files. This means no more sorting through long lists of video files wondering which file is the right one to select - our software does it all for you. Not only that, but for films with multiple angles, a special preview module helps you choose which angle you want to convert.

Extra Fast

Our software has been optimized for multi-core processors meaning you get even faster conversions. Speed up your conversions by using the Cuda profile which will use NVIDIA CUDA technology during the decoding/encoding process. Now convert 3x's faster and you can even use your computer as you normally would without being slowed down by the conversion as your GPU is processing the data instead of your CPU!
