Capture DVD images and save as static picture, animation and HTML page

- **DVD to picture**

Capture snapshot from DVD-Video and DVD folder, and save DVD image captured as JPEG, PNG, GIF and BMP, to produce an eye-catching collection of DVD movie pictures.

- **DVD to animation**

Capture DVD images and output them as animation, such as DVD to GIF, DVD to Flash animation.

- **DVD to HTML page**

Output captured DVD image as HTML page to make viewing and sharing fantastic movie pictures more convenient.

Capture and output pictures in batches
Multiple capture methods to batch capture pictures from DVD movies

- **Batch capture, preview, then output**

Capture pictures from various sources and display captured DVD pictures respectively in the picture list for you to preview, sort, choose, replace or do other operations before outputting them simultaneously.

- **Direct batch capture and output**

Capture DVD image averagely or randomly and save as static pictures, animation or HTML page directly without preview.

Three batch capture ways
Three ways to help you capture DVD images in batches: extract at intervals of given seconds, minutes, hours or frames, grab averagely or randomly by given DVD image capture amounts.

Capture and output pictures in singles
Capture DVD image snapshot you love singly or choose any frame from the frame list

- **Take single snapshot**

Take single snapshot of DVD manually to capture DVD picture to the picture list for preview prior to output.

- **Export DVD picture captured directly**

Drag and drop the current DVD movie frame in playback as static picture to your Mac directly and easily.

- **Output the exact DVD picture by frames**

Browse all DVD pictures every 10/20/40 frames in the frame list, and drag & drop your favorite ones to local disk, or add any frame to the picture list for preview and output.

Free capture and output options
A lot of settings to assist you to do capture and output freely

- **Optional DVD image output mode**

You're optional to output DVD pictures in the picture list captured from different sources respectively, or to choose all pictures captured from different sources with right-click menu to output as a single animation file or HTML page.

- **Batch capture from any segment**

Flexibly choose any DVD segment for batch capture by setting start and end time or dragging left and right slider of the built-in video player directly.

- **Customize DVD image size**

This DVD image capture program for Mac allows you to customize output image size, and offers you optional zoom modes and fill colors to prevent the image from distorting.

- **Extra DVD image capture setting**

Adjusting extra DVD settings makes it possible to output DVD pictures with different subtitles or none and in given angle.

- **Drag and drop**

Directly drag DVD from local to source list, drag current frame from DVD player to the picture list and local, and drag captured DVD images from picture list to local, all these are designed to simplify your DVD picture capture and output.

Preview DVD and captured pictures
Snapshot preview, simple drag-and-drop and so on make this DVD snapshot standout

- **Picture preview**

A picture list is provided for you to preview the captured images to see whether to sort and delete them, or replace the selected one with another from the frame list with right-click menu.
